

## INTELLIGENT DOOR PLATE AND CHIME

### ABSTRACT OF THE DISCLOSURE

5                   A system in operable communication with a doorbell chime for audio  
annunciation of a visitor to an occupant of a room in a multiple room building, the system  
configured to indicate a status of the room to the visitor or occupant, the system  
comprising: a switch assembly configured to convey a message outside of the room; the  
switch assembly operable from inside the room; an indicating assembly in operable  
10 communication with the switch assembly, the indicating assembly configured to indicate  
the message when the message is selected, the message viewable from inside and outside  
of the room; and a doorbell button in operable communication with the doorbell chime,  
the doorbell button operably connected with the indicating assembly and operable from  
outside of the room by the visitor.
